BEC-301	ELECTRONIC DEVICES	3L:1T:0P	4 Credits

Unit	Topics	Lecture s
I	Introduction to semiconductor physics: Review of quantum mechanics, electrons in periodic lattices, E-k diagrams, Effective Mass.	8
II	Energy bands in intrinsic and extrinsic silicon, carrier transport, diffusion current, drift current, mobility and resistivity, sheet resistance, Generation and recombination of carriers, Poisson and continuity equation.	8
	P-N junction characteristics, I-V characteristics, and small signal switching models, Avalanche breakdown, Zener diode, Schottky diode, LED, photodiode and solar cell.	8
IV	Bipolar Junction Transistor, various configurations (such as CE, CB & CC) and their features I-V characteristics, DC biasing schemes for BJT, bias stability, Ebers-Moll model.	8
V	Field Effect Transistor, configurations (such as CS, CD & CG), DC biasing schemes, MOSFET, I-V characteristics, MOS capacitor, C-V characteristics.	8

## **Text/Reference Books:**

- 1. G. Streetman, and S. K. Banerjee, "Solid State Electronic Devices," 7th edition, Pearson, 2014.
- 2. D. Neamen , D. Biswas, "Semiconductor Physics and Devices," McGraw-Hill Education.
- 3. S. M. Sze and K. N. Kwok, "Physics of Semiconductor Devices," 3rd edition, John Wiley & Sons, 2006.
- 4. C.T. Sah, "Fundamentals of Solid State Electronics," World Scientific Publishing Co. Inc, 1991.
- 5. Y. Tsividis and M. Colin, "Operation and Modeling of the MOS Transistor," Oxford univ. press, 2011.
- 6. Muhammad H. Rashid, "Electronic Devices and Circuits," Cengage publication, 2014.

#### **Course outcomes:**

- 1. Understand the principles of semiconductor Physics.
- 2. Understand the carrier transport in semiconductors.
- 3. Analyze and find application of special purpose diodes.
- 4. Understand the working principle and design of Bipolar Junction Transistor.
- 5. Realize the mathematical models of MOS transistors

BEC-302

### **DIGITAL SYSTEM DESIGN**

3L:1T:0P

4 Credits

Linit	Topics	Locturos
Unit		Lectures
I	Logic simplification and combinational logic design: Number Systems, Binary	8
	arithmetic, signed magnitude representation, Binary codes, code conversion,	
	review of Boolean algebra and Demorgans theorem, SOP & POS forms,	
	Canonical forms, Karnaugh maps up to 5 variables, tabulation method.	
П	Combinational circuits: Analysis and Design of combinational circuits, MSI devices	8
	like comparators, multiplexers, demultiplexers, encoder, decoder, circuit	
	realization using Multiplexers and decoders, half and full adders,	
	subtractors, serial and parallel adders, BCD adder, barrel shifter and ALU.	
111	Sequential logic design: Building blocks like S-R, JK and Master-Slave JK FF, D FF, T	8
	FF, edge triggered FF, Flip flop conversion, Applications of Flip Flops: ripple and	
	synchronous counters, Ring counter, Johnson counter, shift registers: SISO, SIPO,	
	PISO. PIPO. Bidirectional shift register. Universal shift register: Finite state	
	machines: Mealy and Moore machines. State diagrams, state reduction, Analysis	
	of clocked sequential circuits. Design of clocked sequential circuits	
IV	Logic families and semiconductor memories: TTL NAND gate specifications noise	8
	margin propagation delay fan-in fan-out tristate TTL FCL CMOS families and	U
	their interfacing memory elements	
	cinem internacing, memory elements,	
	concept of programmable logic devices like FPGA, logic implementation using	
	programmable devices.	
V	Digital-to-Analog converters (DAC): Specifications of DACs, Weighted resistor, R-	8
	2R ladder, Analog-to-digital converters (ADC): Specifications of ADCs, principle of	
	ADC, switched capacitor circuits: Basic concept, practical configurations, ADC etc.	
	ADC Types: dual slope, successive approximation, counting type, flash etc.	

## **Text/Reference Books:**

- 1. R.P. Jain, "Modern Digital Electronics," Tata McGraw Hill, 4th edition, 2009.
- 2. A. Anand Kumar, "Fundamental of Digital Circuits," PHI 4<sup>th</sup> edition, 2018.
- 3. W.H. Gothmann, "Digital Electronics- An Introduction to Theory and Practice," PHI, 2<sup>nd</sup> edition, 2006.
- 4. D.V. Hall, "Digital Circuits and Systems," Tata McGraw Hill, 1989.
- 5. A. K. Singh, "Foundation of Digital Electronics & Logic Design," New Age Int. Publishers.
- 6. Subrata Ghosal, "Digital Electronics," Cengage publication, 2<sup>nd</sup> edition, 2018

#### **Course outcomes:**

- $1. \ \ {\rm Perform\ numerous\ arithmetic\ and\ logic\ simplification\ using\ various\ methods.}$
- 2. Design and analyze modular combinational circuits with MUX / DEMUX, Decoder & Encoder
- 3. Design & analyze synchronous sequential logic circuits
- 4. Analyze various logic families and design circuits using PLDs.
- 5. Design various ADCs and DACs according to the given specifications.

BEC-303

Linit	Taulas	Lootuvoo
Unit	Topics	Lectures
I	Node and mesh analysis, matrix approach of network containing voltage & current	8
	sources and reactances, source transformation and duality.	
Π	Network theorems: Superposition, reciprocity, Thevenin's, Norton's, Maximum	8
	power transfer, compensation and Tallegen's theorem as applied to A.C. circuits.	
111	Laplace transforms and properties: Partial fractions, singularity functions, waveform	8
	synthesis, analysis of RC, RL, and RLC networks with and without initial conditions	
	with Laplace transforms evaluation of initial conditions.	
	Steady state response of a network to non-sinusoidal periodic inputs, Power factor,	
	effective values.	
IV	Network function for one-port and two-port, calculation of network function for	8
	ladder and general networks, poles and zeros with restrictions for driving point	
	functions and transform functions.	
	Two-Port Network: Introduction, Parameters, and Condition for reciprocity and	
	symmetry, Relation between port parameters, Interconnection of two ports	
	networks.	
v	Sinusoidal response from pole-zero locations, convolution theorem, behaviour of	8
	series and parallel resonant circuits.	
	Introduction to band pass, low pass, high pass and band reject filters	

# Text/Reference Books:

- 1. Franklin F. Kuo, "Network Analysis and Synthesis," Wiley India Education, 2<sup>nd</sup> Ed., 2006.
- 2. Van, Valkenburg, "Network analysis," Pearson, 2019.
- 3. Sudhakar, A., Shyammohan, S. P., "Circuits and Network," Tata McGraw-Hill New Delhi, 1994.
- 4. A William Hayt, "Engineering Circuit Analysis," 8th Edition, McGraw-Hill Education.
- 5. A. Anand Kumar, "Network Analysis and Synthesis," PHI publication, 2019.

# **Course Outcomes:**

- 1. Understand basics electrical circuits with nodal and mesh analysis.
- 2. Apply electrical network theorems.
- 3. Apply Laplace transform for analysis steady state and transient behaviour of network circuit.
- 4. Determine different network functions of Two Port network
- 5. Analyse the frequency response of various filters.

BEC351 ELECTRONIC DEVICES LAB 0L:0T:2
---------------------------------------

- 1. **Study of Lab Equipment and Components:** CRO, multimeter, and function generator, power supply- active, passive components and bread board.
- 2. **P-N Junction diode:** Characteristics of PN junction diode static and dynamic resistance measurement from graph.
- 3. **Applications of PN Junction diode:** Half & Full wave rectifier- Measurement of Vrms, Vdc, and ripple factor.
- 4. **Characteristics of Zener diode:** V-I characteristics of Zener diode, graphical measurement of forward and reverse resistance.
- 5. **Characteristics of Photo diode:** V-I characteristics of photo diode, graphical measurement of forward and reverse resistance.
- 6. **Characteristics of Solar cell:** V-I characteristics of solar cell, graphical measurement of forward and reverse resistance.
- 7. **Application of Zener diode:** Zener diode as voltage regulator. Measurement of percentage regulation by varying load resistor.
- 8. **Characteristic of BJT:** BJT in CE configuration- graphical measurement of h- parameters from input and output characteristics. Measurement of Av, AI, Ro and Ri of CE amplifier with potential divider biasing.
- Field Effect Transistors: Single stage common source FET amplifier –plot of gain in dB Vs frequency, measurement of, bandwidth, input impedance, maximum signal handling capacity (MSHC) of an amplifier.
- 10. Metal Oxide Semiconductor Field Effect Transistors: Single stage MOSFET amplifier -plot of gain in dB Vs frequency, measurement of, bandwidth, input impedance, maximum signal handling capacity (MSHC) of an amplifier.
- 11. Simulation of amplifier circuits studied in the lab using any available simulation software and measurement of bandwidth and other parameters with the help of simulation software.

## Course outcomes:

- At the end of this course students will demonstrate the ability to:
- 1. Understand working of basic electronics lab equipment.
- 2. Understand working of PN junction diode and its applications.
- 3. Understand characteristics of Zener diode.
- 4. Design a voltage regulator using Zener diode.
- 5. Understand working of BJT, FET, MOSFET and apply the concept in designing of amplifiers.

BEC352	DIGITAL SYSTEM DESIGN LAB	0L:0T:2P	1 Credits

- 1. Introduction to digital electronics lab- nomenclature of digital ICs, specifications, study of the data sheet, Concept of Vcc and ground, verification of the truth tables of logic gates using TTL ICs.
- 2. Implementation of the given Boolean function using logic gates in both SOP and POS forms.
- 3. Verification of state tables of RS, JK, T and D flip-flops using NAND & NOR gates.
- 4. Implementation and verification of Decoder using logic gates.
- 5. Implementation and verification of Encoder using logic gates.
- 6. Implementation of 4:1 multiplexer using logic gates.
- 7. Implementation of 1:4 demultiplexer using logic gates.
- 8. Implementation of 4-bit parallel adder using 7483 IC.
- 9. Design, and verify the 4-bit synchronous counter.
- 10. Design, and verify the 4-bit asynchronous counter.
- 11. Implementation of Mini Project using digital integrated circuits and other components.

#### **Course outcomes:**

- 1. Design and analyze combinational logic circuits.
- 2. Design & analyze modular combinational circuits with MUX/DEMUX, decoder, encoder.
- 3. Design & analyze synchronous sequential logic circuits.
- 4. Design & build mini project using digital ICs.

# BEC353 NETWORK ANALYSIS AND SYNTHESIS LAB

0L:0T:2P

# SUGGESTIVE LIST OF EXPERIMENTS

- 1. Verification of Kirchhoff's laws.
- 2. Verification of Superposition theorem.
- 3. Verification of Thevenin's Theorem and Maximum power transfer theorem.
- 4. Verification of Tallegen's theorem.
- 5. Measurement of power and power factor in a single-phase AC series inductive circuit and study improvement of power factor using capacitor.
- 6. Study of phenomenon of resonance in RLC series circuit and obtain resonant frequency.
- 7. Determination of parameters of AC single phase series RLC circuit.
- 8. To find poles and zeros of immittance function.
- 9. Design and find cut-off frequency of low pass and high pass filters.
- 10. Design and find the pass band frequencies of band pass filters.
- 11. Design and find the stop band frequencies of band reject filters.

# **Course Outcomes:**

- 1. Understand basics of electrical circuits with nodal and mesh analysis.
- 2. Appreciate electrical network theorems.
- 3. Analyse RLC circuits.
- 4. Determine the stability of an electrical circuit.
- 5. Design network filters.

# **SEMESTER-IV**

BEC401	COMMUNICATION ENGINEERING	3L:0T:0P	3 Credits
--------	---------------------------	----------	-----------

Linit	Topics	Loctures
Unit	Topics	Lectures
1	Review of signals and systems, frequency domain representation of signals,	8
	nrinciples of amplitude modulation systems, DSB_SSB and VSB	
	principles of amplitude modulation systems Dob, 550 and V50	
-	modulations.	
II	Angle modulation, representation of FM and PM signals, spectral	8
	characteristics of angle modulated signals.	
	Device of matched and an analysis of the second sec	0
111	Review of probability and random process, Gaussian and white noise	8
	characteristics, noise in amplitude modulation systems, noise in frequency	
	modulation systems, pre-emphasis and de-emphasis, threshold effect in	
	angle modulation	
-		
IV	Pulse modulation, sampling process, pulse amplitude and pulse code	8
	modulation (PCM), differential pulse code modulation. Delta modulation, noise	
	considerations in DCM time division multiploving digital	
	considerations in PCIVI, time division multiplexing, digital	
	multiplexers.	
V	Digital modulation schemes- phase shift keying, frequency shift keying,	8
	quadrature amplitude modulation continuous phase modulation and	
	minimum shift koving	
	minimum smit keying.	

#### **Text/Reference Books:**

- 1. Haykin S., "Communications Systems," John Wiley and Sons, 2001.
- 2. Proakis J. G. and Salehi M., "Communication Systems Engineering," Pearson Education, 2002.
- 3. Taub H. and Schilling D.L., "Principles of Communication Systems," Tata McGraw Hill, 2001.

- 6. Proakis J.G., "Digital Communications',' 4th Edition, McGraw Hill, 2000.
- 7. Abhay Gandhi, "Analog and Digital Communication," Cengage publication, 2015.

# **Course Outcomes:**

- 1. Analyze and compare different analog modulation schemes for their efficiency and bandwidth.
- 2. Analyze the behavior of a communication system in presence of noise.
- 3. Investigate pulsed modulation system and analyze their system performance.
- 4. Investigate various multiplexing techniques.
- 5. Analyze different digital modulation schemes and compute the bit error performance.

BEC-402	ANALOG CIRCUITS	3L:1T:0P	4 Credits	
---------	-----------------	----------	-----------	--

Unit	Topics	Lectures
I	Amplifier models: Voltage amplifier, current amplifier, trans-conductance	8
	amplifier and trans-resistance amplifier. Small signal analysis, low frequency	
	transistor models, estimation of voltage gain, input resistance, output resistance	
	etc., design procedure for particular specifications, low frequency	
	analysis of multistage amplifiers.	
II	Frequency response of Amplifiers: High frequency transistor models, frequency	8
	response of single stage and multistage amplifiers, cascade amplifier, Feedback	
	topologies: Voltage series, current series, voltage shunt, current shunt, effect	
	of feedback on gain, bandwidth etc., calculation,	
	concept of stability, gain margin and phase margin.	
- 111	Oscillators: Review of the basic concept, Barkhausen criterion, RC	8
	oscillators (phase shift, Wien bridge etc.), LC oscillators (Hartley, Colpitt,	
	Clapp etc.), Crystal Oscillator.	
IV	Current mirror: Basic topology and its variants, V-I characteristics, output	8
	resistance and minimum sustainable voltage (VON), maximum usable load,	
	differential amplifier: Basic structure and principle of operation, calculation of	
	differential gain, common mode gain, CMRR and ICMR,	
	<b>Op-Amp design:</b> Design of differential amplifier for a given specification,	
	design of gain stages and output stages, compensation.	
v	<b>Op-Amp applications:</b> Review of inverting and non-inverting amplifiers,	8
	integrator and differentiator, summing amplifier, precision rectifier, Schmitt	
	trigger and its applications.	
	Various classes of operation (Class A, B, AB, C etc.), their power efficiency and	
	linearity issues.	

#### **Text/Reference Books:**

- 3. P. Horowitz and W. Hill, "The Art of Electronics," 2<sup>nd</sup> edition, Cambridge University Press, 1989.
- 4. A.S. Sedra and K.C. Smith, "Microelectronic Circuits," Saunder's College11 Publishing, 4<sup>th</sup> edition.
- 5. Paul R. Gray and Robert G. Meyer, "Analysis and Design of Analog Integrated Circuits", John Wiley, 3rd edition.
- 6. Muhammad H. Rashid, "Electronic Devices and Circuits," Cengage publication, 2014.

# **Course Outcomes:**

- 1. Understand and design of the various amplifiers.
- 2. Understand the concept of feedback topologies.
- 3. Design the different types of oscillators.
- 4. Understand the functioning of OP-AMP and design OP-AMP based circuits.
- 5. Apply the concept of Operational amplifier to design linear and non-linear applications.

BEC403	SIGNAL SYSTEM	3L:1T:0P	4 Credits
--------	---------------	----------	-----------

Unit	Topics	Lectures
	Signals and systems as seen in everyday life, and in various branches of engineering and science, energy and power signals, continuous and discrete time signals, continuous and discrete amplitude signals, system properties: linearity, additivity and homogeneity, shift-invariance, causality, stability, realizability.	8
=	Linear shift-invariant (LSI) systems, impulse response and step response, convolution, input-output behaviour with aperiodic convergent inputs, characterization of causality and stability of linear shift invariant systems, system representation through differential equations and difference equations, Periodic and semi-periodic inputs to an LSI system, the notion of a frequency response and its relation to the impulse response	8
	Fourier series representation, Fourier transform, convolution/multiplication and their effect in the frequency domain, magnitude and phase response, Fourier domain duality, Discrete-Time Fourier Transform (DTFT) and the Discrete Fourier transform (DFT), Parseval's Theorem, the idea of signal space and orthogonal bases, the Laplace transform, notion of Eigen functions of LSI systems, a basis of Eigen functions, region of convergence, poles and zeros of system, Laplace domain analysis, solution to differential equations and system behaviour.	8
IV	The z-Transform for discrete time signals and systems-Eigen functions, region of convergence, z-domain analysis.	8
v	The sampling theorem and its implications- spectra of sampled signals, reconstruction: ideal interpolator, zero-order hold, first-order hold, and so on, aliasing and its effects, relation between continuous and discrete time systems.	8

- 11. D. Ganesh Rao, K.N. Hari Bhat, K. Anitha Sheela, "Signal, Systems, and Stochastic Processes," Cengage publication, 2018.

#### Course outcomes:

- 1. Analyze different types of signals.
- 2. Analyze linear shift-invariant (LSI) systems.
- 3. Represent continuous and discrete systems in time and frequency domain using Fourier series and transform.
- 4. Analyze discrete time signals in z-domain.
- 5. Study sampling and reconstruction of a signal.

# BEC451 COM

## SUGGESTIVE LIST OF EXPERIMENTS

- 1. To study DSB/ SSB amplitude modulation & determine its modulation factor & power in side bands.
- 2. To study amplitude demodulation by linear diode detector.
- 3. To study frequency modulation and determine its modulation factor.
- 4. To study sampling and reconstruction of pulse amplitude modulation system.
- 5. To study pulse amplitude modulation.
  - a) Using switching method
  - b) By sample and hold circuit
- 6. To demodulate the obtained PAM signal by 2nd order LPF.
- 7. To study pulse width modulation and pulse position modulation.
- 8. To study pulse code modulation and demodulation technique.
- 9. To study delta modulation and demodulation technique.
- 10. To construct a square wave with the help of fundamental frequency and its harmonic component.
- 11. Study of amplitude shift keying modulator and demodulator.
- 12. Study of frequency shift keying modulator and demodulator.
- 13. Study of phase shift keying modulator and demodulator.
- 14. Study of single bit error detection and correction using hamming code.
- 15. Study of quadrature phase shift keying modulator and demodulator.
- 16. To simulate differential phase shift keying technique using MATLAB software.
- 17. To simulate M-array Phase shift keying technique using MATLAB software (8PSK,16PSK) and perform BER calculations.
- 18. Design a front end BPSK modulator and demodulator.

# **Course Outcomes:**

- 1. Analyze and compare different analog modulation schemes for their modulation factor and power.
- 2. Study pulse amplitude modulation.
- 3. Analyze different digital modulation schemes and can compute the bit error performance.
- 4. Study and simulate the Phase shift keying.
- 5. Design a front end BPSK modulator and demodulator.

BEC452	ANALOG CIRCUIT LAB	0L:0T:2P	1 Credits
--------	--------------------	----------	-----------

- 1. Characteristic of BJT: Study of BJT in various configurations (such as CE/CS, CB/CG, CC/CD).
- 2. BJT in CE configuration: Graphical measurement of h-parameters from input and output characteristics, measurement of Av, AI, Ro and Ri of CE amplifier with potential divider biasing.
- 3. Study of Multi-stage amplifiers: Frequency response of single stage and multistage amplifiers.
- 4. Feedback topologies: Study of voltage series, current series, voltage shunt, current shunt, effect of feedback on gain, bandwidth etc.
- 5. Measurement of Op-Amp parameters: Common mode gain, differential mode gain, CMRR, slew rate.
- 6. Applications of Op-Amp: Op-Amp as summing amplifier, difference amplifier, integrator and differentiator.
- 7. Field effect transistors: Single stage common source FET amplifier –plot of gain in dB vs frequency, measurement of bandwidth, input impedance, maximum signal handling capacity (MSHC) of an amplifier.
- 8. Oscillators: Study of sinusoidal oscillators- RC oscillators (phase shift, Wien bridge etc.).
- 9. Study of LC oscillators (Hartley, Colpitt, Clapp etc.),
- 10. Study of non-sinusoidal oscillators.
- 11. Simulation of amplifier circuits studied in the lab using any available simulation software and measurement of bandwidth and other parameters with the help of simulation software.
- 12. ADC/DAC: Design and study of Analog to Digital Converter.
- 13. Design and study of Digital to Analog Converter.

#### **Course Outcome**

- 1. Understand the characteristics of transistors.
- 2. Design and analyze various configurations of amplifier circuits.
- 3. Design sinusoidal and non-sinusoidal oscillators.
- 4. Understand the functioning of OP-AMP and design OP-AMP based circuits.
- 5. Design ADC and DAC.

BEC453	SIGNAL SYSTEM LAB	0L:0T:2P	1 Credits
--------	-------------------	----------	-----------

- 1. Introduction to MATLAB
  - a. To define and use variables and functions in MATLAB.
  - b. To define and use Vectors and Matrices in MATLAB.
  - c. To study various MATLAB arithmetic operators and mathematical functions.
  - d. To create and use m-files.
- 2. Basic plotting of signals
  - a. To study various MATLAB commands for creating two- and three-dimensional plots.
  - b. Write a MATLAB program to plot the following continuous time and discrete time signals.
    - i. Step Function
    - ii. Impulse Function
    - iii. Exponential Function
    - iv. Ramp Function
    - v. Sine Function
- Time and Amplitude transformations Write a MATLAB program to perform amplitude-scaling, time-scaling and time-shifting on a given signal.
- 4. Convolution of given signals

Write a MATLAB program to obtain linear convolution of the given sequences.

- 5. Autocorrelation and Cross-correlation
  - a. Write a MATLAB program to compute autocorrelation of a sequence x(n) and verify the property.
  - b. Write a MATLAB program to compute cross-correlation of sequences x(n) and y(n) and verify the property.
- 6. Fourier Series and Gibbs Phenomenon
  - a. To calculate Fourier series coefficients associated with Square Wave.
  - b. To Sum the first 10 terms and plot the Fourier series as a function of time.
  - c. To Sum the first 50 terms and plot the Fourier series as a function of time.
- 7. Calculating transforms using MATLAB
  - a. Calculate and plot Fourier transform of a given signal.
  - b. Calculate and plot Z-transform of a given signal.
- 8. Impulse response and Step response of a given system
  - a. Write a MATLAB program to find the impulse response and step response of a system form its difference equation.
  - b. Compute and plot the response of a given system to a given input.
- 9. Pole-zero diagram and bode diagram
  - a. Write a MATLAB program to find pole-zero diagram, bode diagram of a given system from the given system function.
  - b. Write a MATLAB program to find, bode diagram of a given system from the given system function.
- 10. Frequency response of a system

Write a MATLAB program to plot magnitude and phase response of a given system. 11. Checking linearity/non-linearity of a system using SIMULINK

- a. Build a system that amplifies a sine wave by a factor of two.
- b. Test the linearity of this system using SIMULINK.

### Course outcomes:

- 1. Understand the basics operation of MATLAB.
- 2. Analysis the time domain and frequency domain signals.
- 3. Implement the concept of Fourier series and Fourier transforms.
- 4. Find the stability of system using pole-zero diagrams and bode diagram.
- 5. Design frequency response of the system.
